General Safety ◆ To install TRiPEAK Bottom Bracket, we strongly recommend that you have

- Do not alter this product in any way as it can cause unseen damage. Any modifications to this product will void the warranty.
- Improperly attached cranks can become detached from the BB set. When cleaning the bottom bracket set, only use mild soap and water.

Make sure the crankset is firmly attached to the bottom bracket,

ingress and influencing the bearing rolling lifetime. If you have any questions or concerns about this product,

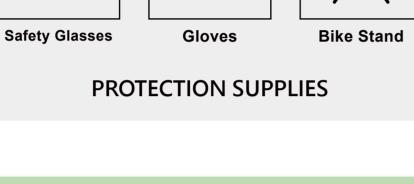

Please feel free to contact us. E-mail:info@tripeakbearing.com

Never use high-pressure water jet, It will cause BB cup internal water

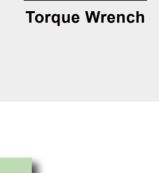

Required Tools TRIPEAK Tool Required : B015

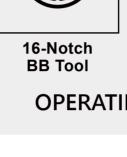

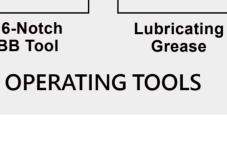

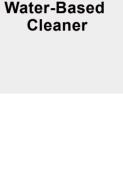

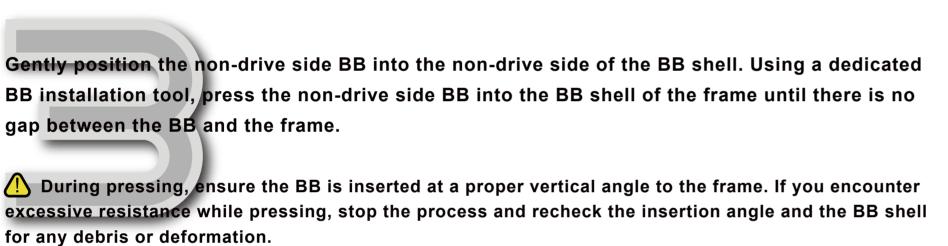

Ensure that the internal cable routing of the frame will not interfere with the bottom bracket

(BB) installation. Clean the inside of the BB shell on the frame, ensuring it is smooth and free of debris. Apply a thin layer of grease to the inner edges of the BB shell to assist with smooth BB installation.

Remove the drive-side BB, which will be installed later.

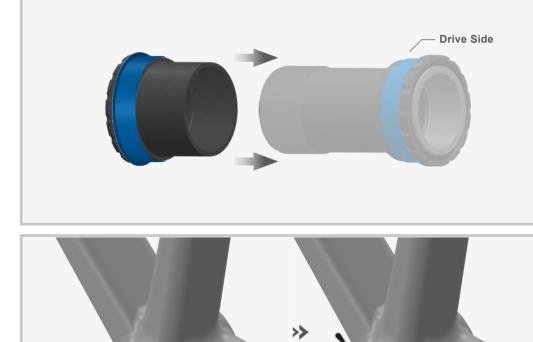

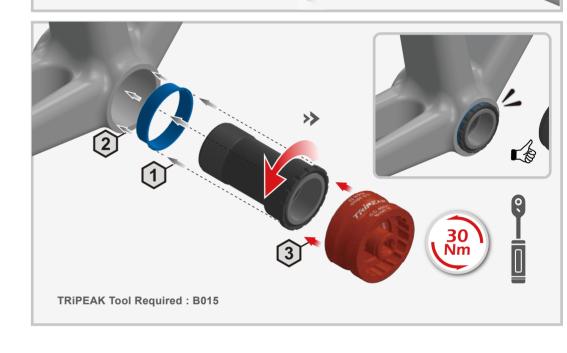

value of 30Nm, ensuring there is no gap between the BB and the frame's BB shell, completing the BB installation. If the non-drive side BB rotates along with the drive-side BB during installation, prepare another BB wrench (B015) to secure the non-drive side BB in place, ensuring the required torque value is reached.

Align the drive-side BB along with the Snug Ring vertically with the inside of the drive-side BB

shell on the frame, and rotate it counterclockwise to insert. Then, use the BB wrench (B015) to

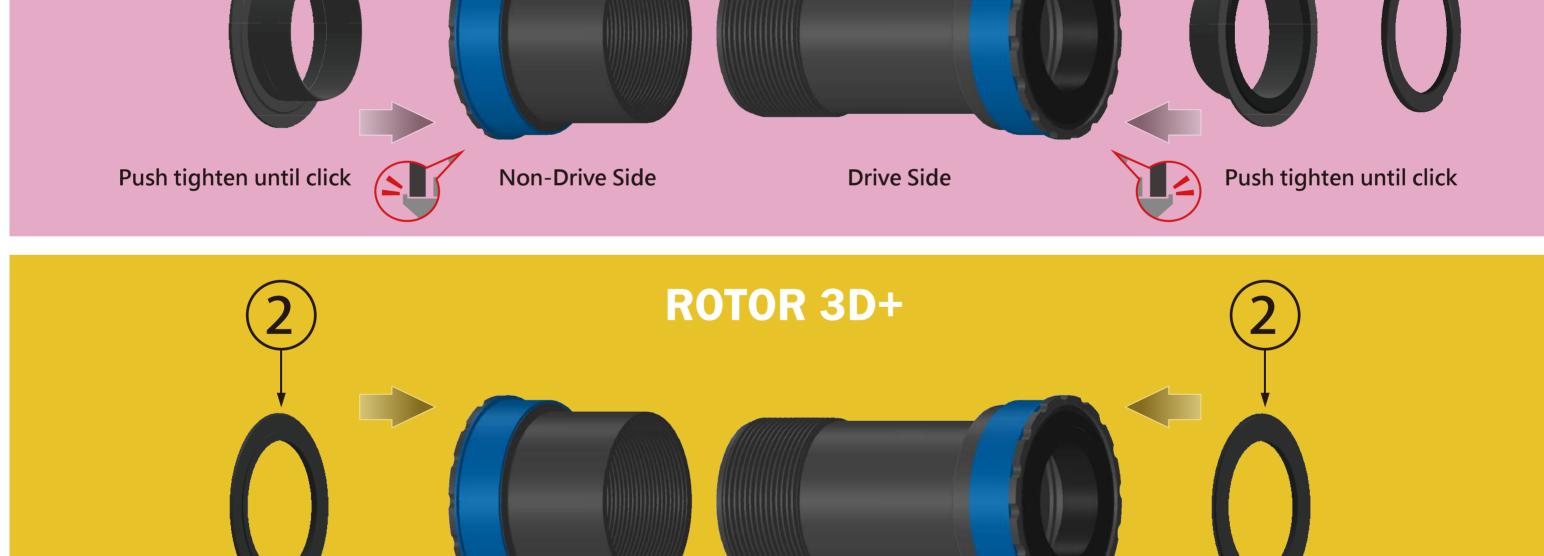

fit the drive-side BB, continuing to rotate counterclockwise to press it in. Tighten to a torque
